In-Home Anti-coagulation Monitoring

Recognition of the special needs of patients on anti-coagulation therapy treatment has driven us to establish a specially designed, in-home anti-coagulation management program

Our professional staff is licensed and certified by the American Society of Clinical Pathologists and the National Certification Agency for Clinical Laboratory personnel. Our state of the art equipment provides accurate and immediate results within minutes.

Among the many advantages of providing anti-coagulation monitoring in the patient's home is increased patient compliance with prescribed therapy. Additionally, because results are reported immediately from the home to the physician, the time lapse between testing and adjustment of medication dose is eliminated. The result is a decreased risk of heart attack, stroke or internal bleeding for patients on anti-coagulation treatment.

SIGMA CLINICAL LAB

Program Advantages

- In-home visit convenience.
- Bedside testing.
- Immediate reporting.
- Prompt dose adjustment.
- Increased patient satisfaction.
- Guaranteed accurate results.
- Visits made within 24 hours.
- Teaching on medication, and safety.

Qualified Medicare patients,

100% covered.
